

## Health Declaration

A daily temperature check must be performed each day at arrival on site.

- The temperature result should be **below 37.8°C**

Everyone must verbally declare they have no symptoms of COVID-19 which are described below:

- **High temperature** – this means you feel hot to touch on your chest or back (you do not need to measure your temperature)
- **New continuous cough** – this means coughing a lot for more than an hour, or 3 or more coughing episodes in 24 hours (if you usually have a cough, it may be worse than usual)
- **Loss or change to your sense of smell or taste** – this means you have noticed you cannot smell or taste anything, or things smell or taste different to normal.
- **New shortness of breath**

In addition to the symptoms of COVID-19 please ensure the following questions are asked:

- Have **you** had contact with anyone with COVID-19 in **the past 14 days** (defined as being within 1.5 metres of them for more than 15 minutes)?
- Does anyone in your **household** have any of the above symptoms?.

### Management of suspected COVID-19 case

A person suspected of having COVID-19 **MUST** be isolated until they present with a negative COVID-19 swab test result.

Any suspected case of COVID-19 will require assessment by a Health Care Professional who must wear adequate PPE.

PPE (mask and gloves) should be provided, and an assessment undertaken within a designated isolation room onsite, which should ideally be near the screening services at the designated client venue.

A full assessment of symptoms, a temperature check and, if confirmed as being appropriate, an antigen test should be arranged.  
The Client Medical Officer must follow the client's agreed processes for managing a suspected COVID-19 case.
